

STATISTICS ASSIGNMENT

Q1

Plotting Histogram

{ 10, 13, 18, 22, 27, 32, 38, 40, 45, 51, 56, 57, 88, 90, 92, 94, 99 }

Frequency

Bins = 10

2.

$$\sigma = 100, \quad n = 25, \quad \bar{x} = 520, \quad C.I = 80\%$$

$$\alpha = 1 - C.I = 1 - 0.8 = \underline{\underline{0.2}}$$

$$Z_{\alpha/2} = Z_{\frac{0.2}{2}} = \underline{\underline{Z_{0.1}}}$$

$$\underline{\underline{1 - 0.1 = 0.9}}$$

From Z table, we find value for 0.9

$$\therefore \underline{\underline{Z_{0.1} = 1.29}}$$

$$\begin{aligned} \text{Lower fence} &= \bar{x} - Z_{\alpha/2} \left(\frac{\sigma}{\sqrt{n}} \right) = 520 - 1.29 \left(\frac{100}{\sqrt{25}} \right) \\ &= \underline{\underline{494.2}} \end{aligned}$$

$$\begin{aligned} \text{Higher fence} &= 520 + 1.29 \left(\frac{100}{\sqrt{25}} \right) \\ &= \underline{\underline{545.8}} \end{aligned}$$

3.

$$(1) H_0 : P_0 \geq 60\%$$

$$H_1 : P_0 < 60\%$$

$$n = 250, \quad x = 170$$

$$\hat{p} = \frac{x}{n} = \frac{170}{250} = \underline{\underline{0.68}}$$

$$q_0 = 1 - P_0 = 1 - 0.6 = \underline{\underline{0.4}}$$

(2)

$$\alpha = 0.1$$

from Z table we get value as -1.28

$$Z_{\text{test}} = \frac{\hat{p} - P_0}{\sqrt{\frac{P_0 q_0}{n}}}$$

$$= \frac{0.68 - 0.6}{\sqrt{\frac{0.6 \times 0.4}{250}}} = \underline{\underline{0.266}}$$

$$0.266 > -1.28$$

\therefore we accept the null hypothesis

Q4.

Value of 99 percentile

 $\{2, 2, 3, 4, 5, 5, 5, 6, 7, 8, 8, 8, 8, 8, 9, 9, 10, 11, 11, 12\}$

$$\frac{\text{percentile} \times n}{100} = \frac{99}{100} \times 20 = \underline{\underline{19.8^{\text{th}} \text{ index}}}$$

$$\underline{\underline{11.5}}$$

Q5. Relationship between mean, median and mode in left and right skewed data.

Right skewed

Left Skewed
